

RocketRoute

HELI OPS

Supported by Air BP

air bp

RocketRoute has developed with ÖAMTC, based in Austria, a version of RocketRoute that meets the specific needs of HEMS operators. RocketRoute is now pleased to offer this solution for any HEMS operators, police force or military division.

KEY FEATURES

1. Automatic Flight Logging

Using the RocketRoute mobile app, simply turn the app on and set it to 'broadcast'. The system will then automatically record all flights and add them to a central flight database.

RocketRoute uses a mixture of cellular data and GPS tracking to record and generate flight information.

2. Quick File

When in an emergency, HEMS need to prepare a flight plan in the minimum of clicks. Rocketroute has developed a quick and easy approach that does not impact the speed of responding to an emergency.

The benefit being every flight now has an appropriate flight plan when carrying members of the public.

3. Helicopter Mass and Balance and Fuel Performance

RocketRoute has built a specific Mass and Balance for helicopter operations, including Lateral Balance and automatic loading based of Crew and Roster/Schedule information.

3. Mass & Balance

4. Low Level Detailed Topographical Maps with Custom Locations

Detailed maps can be added to RocketRoute for any operational area to any level of detail. Custom locations for hospitals and facilities can also be easily added.

5. Centralised tracking

If operations are within Mobile Data coverage, RocketRoute will display a fleet in realtime and any flights. This provides a centralized view for planning and management.

INTERESTED TO TRIAL ROCKETROUTE HEMS?

Contact our sales team sales@rocketroute.com or telephone on +44 1273 782130. We will be pleased to provide a demonstration and trial of the solution.

We will also be pleased to include any customizations required.

1. Tracklog

2. Quick file

4. Topographical map

5. Centralised Tracking
